Influenza Surveillance Report
Week 45: Nov 4th – Nov 10th, 2012

I. Influenza Summary to Date
Influenza surveillance for suburban Cook County** involves the weekly collection of data from a sample of hospitals, private physician’s offices, and laboratory data. The current level of influenza activity is as expected for this time of year. Our sentinel participants reported the following aggregate measures: Syndromic Surveillance: 1.03% ILI¹, Sentinel Sites: 1.71% ILI². 13 specimens tested by participating laboratories were positive for influenza. Since Week 35 (8/26/2012), suburban Cook County has had four cases of influenza-associated intensive care unit (ICU) hospitalizations. During week 45, one ICU hospitalization due to influenza infection was reported to CCDPH. Thank you to all of our surveillance partners for their help in collecting this information.

II. Syndromic Surveillance Data¹

III. Syndromic Surveillance by Age Group Data¹
IV. Sentinel Provider Data

- Baseline
- 2009 - 2010
- 2010 - 2011
- 2011 - 2012
- 2012 - 2013

% of Visits for ILI

Week Number

Sep Oct Nov Dec Jan Feb Mar Apr May

2009 - 2010
2010 - 2011
2011 - 2012
2012 - 2013

V. Laboratory Surveillance Data

- Number of Positive Specimens
- Percent Positive

VII. Regional Data

(All data are preliminary and may change as more reports are received.)

1. Syndromic surveillance influenza-like-illness (ILI) syndrome is defined as a symptom complex fever and cough or sore throat from ESSENCE. 32 hospital EDs participate in ESSENCE. ILI = # of ED visits for ILI / total # of ED visits.

2. ILI is defined as fever \( \geq 100^{\circ}F \), cough and/or sore throat in the absence of a known cause other than influenza. 5 hospital EDs and 8 physician offices are participating CDC sentinel sites.

3. Laboratory surveillance includes viral culture, RT-PCR, and the rapid antigen test. Not all cases are suburban Cook County Residents. Participating laboratories: IDPH, NSUHS, and ACL.

4. Hospitalization and death data are only for suburban Cook County residents (excludes Evanston, Skokie, Oak Park, and Stickney). Data includes reported cases for the presented week.

† No activity: no laboratory confirmed cases of influenza and no reported increase in cases of ILI.

Sporadic: small number of laboratory confirmed influenza cases or a single laboratory confirmed influenza in a single region of the state.

Local: Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in a single region of the state.

Regional: Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least two but less than half the region of the state.

Widespread: Outbreaks of influenza or increases in ILI cases and recent laboratory confirmed influenza in at least half the region in the state.

VIII. United States Data†
