I. Influenza Summary to Date
Influenza surveillance for suburban Cook County** involves the weekly collection of data from a sample of hospitals, private physician’s offices, and laboratory data. The current level of influenza activity is moderate. Our sentinel participants reported the following aggregate measures: Syndromic Surveillance: 1.18% ILI1, Sentinel Sites: 4.05% ILI2. Fifteen (5.2%) specimens tested by participating laboratories were positive for influenza (7 influenza A and 8 influenza B). Of the subtyped influenza A isolates, four (57.1%) were H3N2 and three (42.9%) were H1N1. Since October 3rd, 2010 (week 40), suburban Cook County has had 75 confirmed cases of influenza-associated intensive care unit (ICU) hospitalizations. During week 14, 1 ICU hospitalization due to influenza infection was reported to CCDPH. Thank you to all of our surveillance partners for their help in collecting this information.

II. Syndromic Surveillance Data1

III. Syndromic Surveillance by Age Group Data1
VII. Regional Data

(All data are preliminary and may change as more reports are received.)

1. Syndromic surveillance influenza-like-illness (ILI) syndrome is defined as a symptom complex fever and cough or sore throat from ESSENCE. 32 hospital EDs participate in ESSENCE. ILI = # of ED visits for ILI / total # of ED visits.

2. ILI is defined as fever ≥ 100°F, cough and/or sore throat in the absence of a known cause other than influenza. 5 hospital EDs and 8 physician offices are participating CDC sentinel sites.

3. Laboratory surveillance includes viral culture, RT-PCR, and the rapid antigen test. Not all cases are suburban Cook County Residents. Participating laboratories: IDPH, NSUHS, and ACL.

4. Hospitalization and death data are only for suburban Cook County residents (excludes Evanston, Skokie, Oak Park, and Stickney). Data includes reported cases for the presented week.

5. [External Link: http://www.cdc.gov/flu/weekly/index.htm]† No activity: no laboratory confirmed cases of influenza and no reported increase in cases of ILI.

Sporadic: small number of laboratory confirmed influenza cases or a single laboratory confirmed influenza in a single region of the state.

Local: Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in a single region of the state.

Regional: Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least two but less than half the region of the state.

Widespread: Outbreaks of influenza or increases in ILI cases and recent laboratory confirmed influenza in at least half the region in the state.

† This map indicates geographic spread and does not measure the severity of influenza activity.
